

Task 6: Install the following RPM packages using the package manager of your choice using single command.

- VSFTPD
- PHP
- System-Config-Kickstart
- finger.

The screenshot shows a terminal window within a VMware Workstation environment. The terminal is running the command `yum install vsftpd php system-config-kickstart finger`. The output shows that the packages are being installed from the `centos.excellmedia.net` repository. The `system-config-kickstart` and `finger` packages are already installed. The `vsftpd` package is being updated. The `php` package is being installed along with its dependencies: `php-common`, `php-cli`, and `libzip`. The terminal output is as follows:

```
[root@svr ~]# yum install vsftpd php system-config-kickstart finger
Loaded plugins: fastestmirror, langpacks
